

\$GLOBALS est un array qui nous permet d'avoir accès à nos variable dans la globalité du scope de la vue.

The image shows a code editor with four tabs: index.php, variable.php, promotion.php, and aboutus. The active tab is promotion.php. The code in the editor is as follows:

```
1 <!DOCTYPE html>
2
3 <html>
4
5 <head>
6
7 </head>
8
9 <body>
10 <?php
11     $x = 5;
12     $y = 18;
13
14     function myFunction(){
15
16         echo $GLOBALS['x'];
17     }
18     myFunction();
19
20 ?>
21
22
23 </body>
24
25 </html>
26
```

A terminal window is open above the code editor, displaying the output of the PHP script:

```
array(6) { ["_GET"]=> array(0) { } ["_POST"]=> array(0) { } ["_COOKIE"]=> array(0) { } ["_FILES"]=> array(0) { } ["GLOBALS"]=> *RECURSION* ["compte"]=> string(5) "12345" }
```

An arrow points from the `echo $GLOBALS['x'];` line in the code editor to the `["GLOBALS"]=> *RECURSION*` part of the terminal output.
