

Fonction FILTER_VALIDATE() renvoie un booléen a utilisé dans des conditions si besoin.

```
function isEmail($var){  
    return filter_var($var, filter: FILTER_VALIDATE_EMAIL);  
}  
  
function verifyInput($var){  
    $var = trim($var);  
    $var = stripslashes($var);  
    $var = htmlspecialchars($var);  
    return $var;  
}
```

| | | |
|-------------------------|-------|-----|
| FILTER_VALIDATE_BOOLEAN | = 258 | int |
| FILTER_VALIDATE_DOMAIN | = 277 | int |
| FILTER_VALIDATE_EMAIL | = 274 | int |
| FILTER_VALIDATE_FLOAT | = 259 | int |
