# Installation de json server

## 1 Install JSON Server

```
npm install -g json-server
```

## création du fichier db.json

2

The screenshot shows the VS Code interface. On the left, the Explorer sidebar is open, showing the file structure of a project named 'PROJET-GRAPHQL'. The file 'db.json' is selected. The main editor area displays the content of 'db.json', which is a JSON object with two arrays: 'users' and 'companies'.

```
{
  "users": [
    {
      "id": "1",
      "firstName": "Robin",
      "age": 24,
      "companyId": "3"
    },
    {
      "id": "2",
      "firstName": "Mathieu",
      "age": 26,
      "companyId": "1"
    },
    {
      "id": "3",
      "firstName": "Sarah",
      "age": 25,
      "companyId": "2"
    }
  ],
  "companies": [
    {
      "id": "1",
      "name": "Apple"
    },
    {
      "id": "2",
      "name": "Google"
    },
    {
      "id": "3",
      "name": "Microsoft"
    }
  ]
}
```

3

The screenshot shows a terminal window with the command 'json-server --watch db.json' being executed. The terminal output shows the command being run successfully.

```
MBP-de-Matt:projet-graphql matt$ json-server --watch db.json
```
