Création de 20 posts

The screenshot shows a code editor with a dark theme. On the left, the 'EXPLORATEUR' (Explorer) sidebar is open, showing a file tree for a project named 'REACTREDUX-STARTER-MASTER'. The files listed include 'db.json', 'fillDB.js', 'index.html', 'package-lock.json', 'package.json', 'README.md', and 'webpack.config.js'. The 'fillDB.js' file is selected and highlighted. The main editor area shows the code for 'fillDB.js'. The code uses the 'casual' library to generate 20 posts. An arrow points from the 'fillDB.js' file in the sidebar to the code in the main editor.

```
1 var casual = require('casual');
2
3
4 module.export = () =>{
5   const data = { posts: [] }
6   //Create 20 posts
7   for(let i = 0; i < 20; i++){
8     data.posts.push({ id: i, title: casual.title, content:casual.sentence(n=50), author:casual.name})
9   }
10  return data
11 }
```

On relance le json server en pointant cet fois sur
notre fichier ou on implémente casual .

```
MBP-de-Matt:ReactRedux-Starter-master matt$ json-server --watch fillDB.js
```
