

## Création du composant Flag

Notre composant prend des paramètres

```
JS App.js JS mortality_list.js JS mortality_list_item.js JS flag.js x
1 import React from 'react'
2
3 const URL_BASE = "http://www.sciencekids.co.nz/images/pictures/flags680/"
4
5 const Flag = ({country,className}) => {
6   return (
7     <div>
8       <img className={className} src={` ${URL_BASE}${country}.jpg`} />
9     </div>
10   )
11 }
12
13 export default Flag
```

En appelant notre composant on lui passe des arguments en "dur".

```
JS App.js JS mortality_list.js JS mortality_list_item.js x JS flag.js
1 import React from 'react'
2
3 //---- Import style
4 import '../style/mortality_List_Item.css';
5
6 //----Import composant
7 import Flag from './flag';
8
9
10 const Mortality_List_Item = () => {
11   return (
12     <div>
13       <Flag country={"France"} className="flag_medium" />
14     </div>
15   )
16 }
17
18 export default Mortality_List_Item
```

On passe ensuite notre dumb composant <Mortality\_List\_Item> a <Mortality\_list> et pour finir on passe notre <Mortality\_list> a App.js.

```
JS App.js JS mortality_list.js x JS mortality_list_item.js JS flag.js
1 import React, { Component } from 'react'
2 import Mortality_List_Item from '../components/mortality_list_item';
3
4
5 class Mortality_list extends Component {
6   render () {
7     return (
8       <div>
9         <Mortality_List_Item/>
10      </div>
11    )
12  }
13 }
14
15 export default Mortality_list
```

```
JS App.js x JS mortality_list.js JS mortality_list_item.js JS flag.js
1 //---Import composant react
2 import React, { Component } from 'react';
3
4 //---Import composant
5 import Search_Bar from '../container/Search_bar';
6 import Mortality_list from '../container/mortality_list';
7
8 const DEFAULT_COUNTRY = "France";
9 class App extends Component {
10   render() {
11     return (
12       <div>
13         <Search_Bar defaultCountry={DEFAULT_COUNTRY}/>
14         <Mortality_list/>
15       </div>
16     );
17   }
18 }
19
20 export default App;
21
```
