

boucle foreach

The screenshot shows a code editor with a file named `index.php`. The code is written in PHP and HTML. It starts with a DOCTYPE declaration, followed by the `<html>` tag. Inside the `<head>` tag, there is a `<?php` block. Inside this block, an array `$myArray` is defined with three elements: "Pierre" with value 33, "Coco" with value 39, and "Lila" with value 30. A `foreach` loop is used to iterate over the array, with the loop variable `$alias` representing the key and `$key` representing the value. The loop body contains an `echo` statement that outputs the key and value separated by a dot. The `foreach` loop is closed with a closing brace. The `<?php` block is closed with `?>`. The `<body>` tag is closed with `</body>`, and the `<html>` tag is closed with `</html>`.

```
1      <!DOCTYPE html>
2
3      <html>
4
5          <head>
6
7          </head>
8
9          <body>
10             <?php
11                 $myArray = array("Pierre" => 33, "Coco" => 39, "Lila" => 30);
12
13                 foreach ($myArray as $alias => $key){
14                     echo $alias." ".$key;
15                 }
16             <?>
17
18
19
20         </body>
21
22     </html>
23
24
```
